

INSTRUCTIONAL STORYBOARD

Writing Performance Objectives the CFITES Way

Articulate Rise 360 Microteach — Portfolio Edition

Prepared by: Jordan Rendell Smith, PhD

Date: April 2026

Client context: SkyAlyne Canada—Future Aircrew Training (FAcT) / RCAF

Platform: Articulate Rise 360 (responsive web delivery, portfolio link)

Estimated completion time: 15–20 minutes

Storyboard version: v1.0 (pre-development draft)

Module Learning Objective

Given a job task description drawn from a military aircrew training context, the learner will write a complete CFITES-aligned Performance Objective—including a correctly specified Action, Conditions, and Standard—with no errors in any of the three components.

Module Structure at a Glance

Section	Title	Rise Block Types	Est. Time
Cover	Module Cover & Learning Objective	Cover image, Text block	~1 min
1	Why Performance Objectives Matter	Text + Image, Comparison table, Statement callout	~2 min
2	The Three Components of a CFITES PO	Labeled Graphic, Accordion (×3), Text callout	~5 min
3	Common Errors: Diagnose and Fix	Intro text, Sorting Activity, Feedback	~4 min
4	Practice: Write Your Own	Scenario/Branching Quiz (3 steps), Completion screen	~5 min
5	Quick Reference and Summary	Checklist, File Download, Statement callout	~2 min
End	About This Module	Text block	~30 sec

SECTION COVER: Module Cover & Learning Objective

Frame	Rise Block Type	Screen Title / Nav Label	Visual Description	Script / Body Copy	Design / Dev Notes
C-01	Course Cover Block	Writing Performance Objectives the CFITES Way	Full-width cover image: cockpit instrument panel or training aircraft on runway (royalty-free, Unsplash/Pexels). Dark navy overlay. White course title text centred.	Course title: Writing Performance Objectives the CFITES Way Subtitle: A CFITES-Aligned Microteach for Articulate Rise 360 No on-screen body text—let the image do the work.	<i>Source image query: “cockpit training” or “military training aircraft runway”</i> <i>Navy colour hex: #1F3864</i> <i>Estimated duration: 30 sec</i>
C-02	Text Block	Module Learning Objective	Clean white background. Bold navy heading. Learning objective in regular weight. No image needed.	By the end of this module, you will be able to write a complete CFITES-aligned Performance Objective—including a correctly specified Action, Conditions, and Standard—given a job task description drawn from a military aircrew training context.	<i>Display immediately after cover block.</i> <i>No continue button.</i> <i>Learner scrolls to Section 1.</i>

SECTION 1: Why Performance Objectives Matter

Frame	Rise Block Type	Screen Title / Nav Label	Visual Description	Script / Body Copy	Design / Dev Notes
1-01	Text + Image (right)	The Foundation of Every Training Programme	Right-side graphic: CFITES six-phase cycle (horizontal flow): Needs Assessment → Analysis → Design → Development → Conduct → Evaluation. Navy boxes, white text, arrows between. Learner-created in Canva.	Every effective military training programme begins in the same place—not with aircraft, not with simulators, not with a syllabus. It begins with a precisely worded statement of what a learner must be able to do when training is complete. In CFITES, that statement is called a Performance Objective (PO). POs are produced in the Analysis phase and drive every decision made in the phases that follow. Courseware developers build to them. Instructors teach toward them. Evaluators measure learners against them. Get the PO right, and everything downstream is aligned. Get it wrong, and every resource invested in development, delivery, and evaluation is building on a cracked foundation.	<i>Upload CFITES cycle graphic as PNG, approx. 600×200px.</i> <i>Keep copy to approx. 120 words because this is orienting context, not instruction.</i>
1-02	Statement Callout (navy)	Key Principle	Navy background callout block. Italicised quote in white. No image.	"Performance Objectives define what learners must do, under what conditions, and to what standard—in language precise enough that any qualified evaluator would reach the same pass/fail decision."	<i>Use Rise's built-in Statement block with navy background.</i> <i>Adjust quote attribution: omit attribution for cleaner look in portfolio.</i>
1-03	Text Block / Tabs	POs vs. Fuzzy Goals: A Quick Contrast	Two-column comparison table. Left column header: "Fuzzy Goal" (red X icon). Right column header: "CFITES Performance Objective" (green checkmark). Three example rows.	Row 1—Fuzzy: "Understand pre-flight procedures" Strong: "Given a CT-102B Astra II aircraft and applicable flight manual, the student pilot will complete a pre-flight inspection in accordance with the Pre-Flight Checklist, with zero steps omitted or completed out of sequence." Row 2—Fuzzy: "Know how to handle engine failure" Strong: "Given a simulated single-engine failure during circuit training, the student pilot will execute the emergency drill in accordance	<i>Build as Rise Text Block with embedded table (2 columns, 4 rows incl. header).</i> <i>Use ✕ and ☑ unicode characters in header cells.</i> <i>Follow with brief annotation:</i>

Frame	Rise Block Type	Screen Title / Nav Label	Visual Description	Script / Body Copy	Design / Dev Notes
				with the applicable QRH, within 15 seconds of recognition.” Row 3—Fuzzy: “Appreciate crew resource management principles” Strong: “Given a scenario-based simulator exercise involving a simulated navigation discrepancy, the student will apply CRM communication protocols as defined in the FAcT CRM Standards, resolving the discrepancy without escalation.”	<i>“Notice: every strong PO tells you exactly what the learner does (Action), what they have access to or are working under (Conditions), and what good enough looks like (Standard).”</i>

SECTION 2: The Three Components of a CFITES Performance Objective

Frame	Rise Block Type	Screen Title / Nav Label	Visual Description	Script / Body Copy	Design / Dev Notes
2-01	Text Block (intro)	The Three Components of a CFITES Performance Objective	No image. Clean intro text above the labeled graphic.	A CFITES Performance Objective has exactly three components. Miss one and the PO is incomplete. Let's examine each in detail.	<i>Short intro paragraph only because the Labeled Graphic below carries the visual weight.</i>
2-02	Labeled Graphic Block	ACTION CONDITIONS STANDARD Diagram	Three horizontal boxes in a row. Labels: ACTION (blue), CONDITIONS (green), STANDARD (orange). Each box has a one-line descriptor beneath: "What the learner will DO" / "What they have access to" / "How well is good enough?". Clean white background, navy outline.	[No script—visual only. Learner clicks each label to see the descriptor.]	<i>Create graphic in Canva: three boxes 180×80px each, spaced 20px apart, on white canvas.</i> <i>Upload as PNG, 800×200px minimum.</i> <i>Use Rise Labeled Graphic block—click hotspots reveal descriptor text.</i>
2-03	Accordion Item 1 of 3	ACTION: What the learner will DO	Collapsed accordion panel. Expand arrow on right. Icon: target emoji or custom SVG.	The Action is the heart of the PO. It describes the observable, measurable behaviour the learner must demonstrate to prove competency. Always in the form: [Subject] will [action verb] [object]. The action verb is critical. It must describe something you can see or measure. VERBS TO AVOID: <i>understand</i> · <i>know</i> · <i>appreciate</i> · <i>be aware of</i> · <i>comprehend</i> · <i>learn</i> CFITES LEVEL 1—RECALL: <i>identify, list, name, state, define, label, match</i> CFITES LEVEL 2—UNDERSTAND/APPLY: <i>explain, describe, calculate, classify, sequence, apply, demonstrate</i> CFITES LEVEL 3—PROBLEM-SOLVE: <i>analyse, evaluate,</i>	<i>Verb table: embed as 3-row table inside accordion body.</i> <i>Bold the two column headers: "CFITES Level" and "Strong Verbs."</i> <i>Tip prompt at bottom of accordion body sets up Section 4 practice.</i>

Frame	Rise Block Type	Screen Title / Nav Label	Visual Description	Script / Body Copy	Design / Dev Notes
				<i>select, justify, troubleshoot, adapt</i> FAcT example: "...the student pilot will execute the emergency drill..." → "execute" is Level 2 (Apply). Observable. Measurable. ✓ Try it: Which verb would you use for a task where a student must choose between two navigation options under time pressure? (Seeds Section 4.)	
2-04	Accordion Item 2 of 3	CONDITIONS: What the learner has access to	Collapsed accordion panel.	The Conditions statement specifies the environment and resources present when the learner performs the task. CONDITIONS TYPICALLY DESCRIBE THREE THINGS: 1. Resources provided ("Given..."): Equipment, references, tools, or data the learner may use. Example: "Given a CT-102B Astra II aircraft and applicable flight manual..." 2. Resources denied ("Without..."): Restrictions that define the difficulty level. Example: "...without reference to notes..." / "...with one instrument panel display failed..." 3. Environment: The setting—simulator, aircraft, classroom, OJT, under time pressure. Example: "...during a simulated circuit training exercise..." WEAK vs. STRONG: ✗ "Given appropriate equipment..." → ✓ "Given a CT-102B Astra II aircraft, applicable Pre-Flight Checklist, and PPE..." ✗ "In a training environment..." → ✓ "In a full-motion Level D simulator replicating a Pilatus PC-21 cockpit..." The test: Could a different instructor, reading only the PO, set up the exact same evaluation conditions?	<i>Embed weak/strong comparison as a 2-column table inside accordion body.</i> <i>Bold column headers: "Weak" and "Strong."</i>
2-05	Accordion Item 3 of 3	 STANDARD — How well is 'good enough'?	Collapsed accordion panel.	The Standard defines the minimum acceptable level of performance. STANDARD TYPES WITH EXAMPLES: Accuracy / error tolerance: "...with zero steps omitted or completed out of sequence." /	<i>Keep weak/strong table consistent with Section 2-04 formatting.</i>

Frame	Rise Block Type	Screen Title / Nav Label	Visual Description	Script / Body Copy	Design / Dev Notes
				“...with no more than one computational error.” Time: “...within 15 seconds of recognition.” / “...within the time limit specified in the applicable QRH.” Reference document compliance: “...in accordance with the Pre-Flight Checklist (CT-102B-001).” / “...as defined in the FAcT CRM Standards, Section 4.” Score threshold: “...achieving a minimum score of 70% on the written evaluation.” WEAK vs. STRONG: ✗ “...to a satisfactory level.” → ✓ “...with zero critical steps omitted, as defined in the Evaluation Checklist.” ✗ “...demonstrating good airmanship.” → ✓ “...in accordance with the aircrew standards defined in the applicable Qualification Standard.” The test: Could two different evaluators, using only the PO, independently reach the same pass/fail decision?	<i>Bold the “The test.” prompt lines in both accordions for visual parity.</i>
2-06	Text Block (annotated example)	Putting It All Together	White background. One full example PO with colour-coded bracketed labels: [CONDITIONS] in blue, [ACTION] in green, [STANDARD] in orange. Then the formula callout.	Here is a complete, well-formed CFITES Performance Objective, with each component annotated: [CONDITIONS] Given a simulated single-engine failure during a circuit training exercise in a Pilatus PC-21 full-motion simulator, with all normal instruments functioning, [ACTION] the student pilot will execute the engine failure emergency drill [STANDARD] in accordance with the PC-21 <i>Quick Reference Handbook</i> (Emergency Procedures, Section 3), with all critical steps completed in the correct sequence and within 20 seconds of failure onset. FORMULA (Statement callout, navy): Given [conditions], the [learner] will [verb + object], [standard].	<i>In Rise, use a Text Block—bold and colour the [label] tags manually using Rise’s inline formatting.</i> <i>Follow immediately with a navy Statement callout block for the formula</i>

SECTION 3: Common Errors — Diagnose and Fix

Frame	Rise Block Type	Screen Title / Nav Label	Visual Description	Script / Body Copy	Design / Dev Notes
3-01	Text Block (intro)	Common Errors: Diagnose and Fix	No image. Short framing paragraph.	Now that you know what a strong PO looks like, let's test your diagnostic eye. Six Performance Objectives from a fictional FAcT ground school module are listed below. Sort each one into the correct category.	<i>Keep intro to 2–3 sentences max before the interaction loads. Specify that learner must place all items before feedback is shown</i>
3-02	Sorting Activity Block	Sort the Performance Objectives	Rise Sorting Activity. Three category drop zones:  Well-formed /  Fixable /  Broken. Six draggable PO cards.	CARD 1: “The student will understand crew resource management principles.” →  Broken CARD 2: “Given the FAcT meteorology reference package, the student pilot will interpret a TAF report and identify all significant weather phenomena affecting the planned route, with no more than one interpretation error.” →  Well-formed CARD 3: “The student will describe the five phases of a standard circuit, in the correct sequence, without reference to notes.” →  Fixable (missing environment/setting) CARD 4: “Given appropriate simulator time, the student will appreciate the importance of sterile cockpit procedures.” →  Broken CARD 5: “In a classroom setting, given the applicable CFITES glossary, the student will define the three components of a PO—Action, Conditions, and Standard—providing one accurate example of each, with no definitions missing or incorrect.” →  Well-formed CARD 6: “The student pilot will complete a pre-flight inspection to a satisfactory standard.” →  Fixable (missing conditions; standard is subjective)	<i>Set sorting activity to randomize card order on load. Require all items placed before feedback displays</i>
3-03	Feedback Screens (post-sort)	Category Feedback	Rise sorting activity result screen. Correct/incorrect placement highlights.	 WELL-FORMED FEEDBACK: “Correct. This PO gives any evaluator everything they need: what to provide the learner, what observable behaviour to look for, and an	<i>Write feedback at item level AND category level</i>

Frame	Rise Block Type	Screen Title / Nav Label	Visual Description	Script / Body Copy	Design / Dev Notes
				unambiguous pass/fail threshold." ⚠️ FIXABLE FEEDBACK: "Close. This PO has most of what it needs but is missing or underspecifying one component. In a real CFITES development context, this would go back to the writer for revision." ❌ BROKEN FEEDBACK: "This one needs significant work. Either the verb describes an unobservable mental state, or one or more components are absent entirely. A courseware developer handed this PO could not build assessment-aligned content from it."	<i>if Rise permits.</i> <i>Each broken card should ideally call out which specific component is missing or weak.</i>

SECTION 4: Practice — Write Your Own

Frame	Rise Block Type	Screen Title / Nav Label	Visual Description	Script / Body Copy	Design / Dev Notes
4-01	Text Block (scenario setup)	Practice — Write Your Own	Left: scenario framing text. Right: character image (stock photo of person in flight suit or at whiteboard, royalty-free).	You are a courseware developer on the FAcT program. A Subject Matter Expert (a qualified flying instructor) has handed you the following job task description and asked you to draft a Performance Objective for inclusion in the FAcT Basic Flying Training ground school curriculum.	<i>Character image: search “flight instructor whiteboard” on Unsplash/Pexels.</i> <i>Keep framing text to 2–3 sentences—the scenario block carries the voice.</i>
4-02	Scenario / Quiz Block—Step 1 of 3	Choose Your Action Verb	QFI character image (same as above). Speech bubble style or quote formatting for the SME voice. Four multiple-choice options below.	QFI SAYS: “I need students to be able to read a METAR before their first solo. They need to know what the weather is—specifically the wind, visibility, and cloud ceiling. They’ll have the METAR in front of them. They should get it right—no errors on those three elements.” QUESTION: Which verb best fits the task the QFI described? A) Appreciate B) Understand C) Interpret ← CORRECT D) Know FEEDBACK A: “Appreciate describes a feeling or attitude, not an observable performance. It cannot be evaluated. Try again.” FEEDBACK B: “Understand is one of the most common traps in objective writing. How would you observe or measure understanding? Choose a verb you can see.” FEEDBACK C: “ Correct. Interpret is observable and measurable—an evaluator can compare the student’s interpretation against the correct values in the METAR.” FEEDBACK D: “Know has the same problem as understand. It describes a mental state, not a behaviour.”	<i>Set to require correct answer before advancing (no skip).</i> <i>Branching feedback displays inline before the Next button appears.</i>
4-03	Scenario / Quiz	Build Your Conditions Statement	Same character image. Four	QUESTION: The QFI said students will “have the METAR in front of them.” Which conditions statement	<i>Maintain consistent layout with Step 1—same image,</i>

Frame	Rise Block Type	Screen Title / Nav Label	Visual Description	Script / Body Copy	Design / Dev Notes
	Block— Step 2 of 3		multiple-choice options.	best captures this and the likely training environment? A) “Given appropriate weather documentation...” B) “Given a METAR for a Canadian airfield...” ← CORRECT C) “In a training environment, given weather information...” D) “Without any reference materials...” FEEDBACK A: “Too vague. Conditions should be specific enough that anyone setting up the evaluation knows exactly what to provide.” FEEDBACK B: “ Good. This is specific and accurate to the task. You could strengthen it by specifying the format, but this version is solid.” FEEDBACK C: “Training environment adds little — and weather information is too vague. Specify the document type.” FEEDBACK D: “The QFI specifically said students will have the METAR available. Denying it would misrepresent the task conditions.”	<i>same question format.</i>
4-04	Scenario / Quiz Block— Step 3 of 3	Write Your Standard	Same character image. Four multiple-choice options.	QUESTION: The QFI said students should get the wind, visibility, and ceiling right with “no errors on those three elements.” Which standard best captures this? A) “...to a satisfactory level.” B) “...demonstrating good meteorological awareness.” C) “...correctly identifying wind direction and speed, visibility, and ceiling, with no errors on any of the three elements.” ← CORRECT D) “...achieving a passing score.” FEEDBACK A: “Satisfactory is subjective. Two evaluators could disagree on what it means.” FEEDBACK B: “Meteorological awareness is not measurable. It also drifts away from the specific task the QFI described.” FEEDBACK C: “ Excellent. This is exactly	<i>This is the instructional centrepiece, so feedback must be substantive for each distractor.</i>

Frame	Rise Block Type	Screen Title / Nav Label	Visual Description	Script / Body Copy	Design / Dev Notes
				what the QFI described, translated into objective language. It names the three elements explicitly and sets a clear error tolerance (zero errors)." FEEDBACK D: "Passing score is vague—what score? Based on what criteria?"	
4-05	Text Block (completion screen)	Your Completed Performance Objective	White background, navy heading. Assembled PO in a highlighted callout box. Three self-check prompts with .	HEADING: Your completed Performance Objective Based on your choices, here is the PO you have built: CALLOUT BOX: "Given a METAR for a Canadian airfield in standard ICAO format, the student pilot will interpret the METAR, correctly identifying wind direction and speed, visibility, and ceiling, with no errors on any of the three elements." This is a well-formed CFITES Performance Objective. TRY THE SELF-CHECK—read it aloud and ask:  Can I observe the learner doing this?  Do I know exactly what to give the learner and what to withhold?  Could two evaluators independently reach the same pass/fail decision? If the answer to all three is Yes, your PO is ready to drive courseware development.	<i>Display assembled PO in a navy Statement callout block for visual emphasis.</i> <i>Self-check bullets reinforce the three-component framework from Sections 1–2.</i>

SECTION 5: Quick Reference and Summary

Frame	Rise Block Type	Screen Title / Nav Label	Visual Description	Script / Body Copy	Design / Dev Notes
5-01	Text Block + Numbered List	The CFITES PO Writing Checklist	No image. Clean white background. Three bold subheadings (ACTION / CONDITIONS / STANDARD) with bulleted checklists beneath each.	Use this checklist every time you write or review a Performance Objective. ✅ ACTION: Does the PO contain an observable, measurable action verb? Does it avoid mental-state verbs? Is the verb matched to the appropriate CFITES cognitive level? Does it describe what the learner will do? ✅ CONDITIONS: Are all provided resources clearly named? Are any restrictions explicitly stated? Is the environment/setting specified? Could someone else set up the exact same evaluation conditions? ✅ STANDARD: Is the standard expressed in objective, measurable terms? Does it avoid subjective language? Could two independent evaluators reach the same pass/fail decision?	<i>Subheadings in navy bold; bullets in regular weight</i> <i>Each checklist item should be a full sentence ending with a question mark.</i>
5-02	File Download Block	CFITES PO Writing Checklist (Download)	File download block with document icon. Label clearly visible.	Download: CFITES PO Writing Checklist (PDF)	<i>Design one-page PDF in MS Word: navy header bar, SkyAlyne branding, your name and contact in footer.</i> <i>Upload to Rise as a File Download block—label it exactly as shown in the script.</i> <i>This functions as a job aid and demonstrates performance-support thinking.</i>
5-03	Statement Callout (navy)	Key Takeaways	Navy background. White text. Bulleted list of five takeaways.	Every CFITES Performance Objective has three non-negotiable components: Action, Conditions, Standard. The action verb must be observable and measurable—no mental states.	<i>Use Rise Statement block (navy/dark theme).</i>

Frame	Rise Block Type	Screen Title / Nav Label	Visual Description	Script / Body Copy	Design / Dev Notes
				Conditions must be specific enough that any evaluator can replicate the assessment setup. The standard must be objective enough that two evaluators independently reach the same pass/fail decision. The formula: <i>Given</i> [conditions], <i>the</i> [learner] <i>will</i> [verb + object], [standard].	<i>Keep takeaways to five bullets maximum because this is a summary, not a restatement of all content.</i>
5-04	Text Block	About This Module	Clean white background. Brief attribution paragraph.	This module was developed by Jordan Rendell Smith, PhD, as a portfolio demonstration of instructional design practice aligned with the Canadian Forces Individual Training and Education System (CFITES) framework. It was built in Articulate Rise 360 and reflects design principles drawn from CFITES Volume 6 (Conduct of Instructional Programmes) and the CFITES Design phase PO writing methodology. Jordan Rendell Smith, PhD— Instructional Designer Kanata, ON jordan.rendell.smith@proton.me jordanrendellsmith.github.io	<i>Keep this section brief because it is a portfolio attribution, not a bio.</i>

RISE 360 BUILD CHECKLIST

- ☐ Cover image uploaded (cockpit / training aircraft—royalty-free from Unsplash/Pexels)
- ☐ CFITES six-phase cycle diagram created in Canva and uploaded (Frame 1-01)
- ☐ Three-box ACTION | CONDITIONS | STANDARD diagram created and uploaded (Frame 2-02)
- ☐ QFI character image sourced and uploaded (Frames 4-01 through 4-04)
- ☐ CFITES PO Writing Checklist designed in Canva and exported as PDF (Frame 5-02)
- ☐ All accordion items (Frames 2-03 to 2-05) set to collapsed by default
- ☐ Sorting activity (Frame 3-02) set to randomize item order on load
- ☐ Scenario steps (Frames 4-02 to 4-04) set to require correct answer before advancing
- ☐ File Download block (Frame 5-02) linked to checklist PDF
- ☐ “About this module” section updated with actual contact email before publishing
- ☐ Course published to Articulate Review 360; test link in incognito browser before sharing
- ☐ Portfolio site (jordanrendellsmith.github.io) updated with Rise 360 link
