

TAILGATE TALK 2.0

Pre-Job Briefing Checklist for the Driver-Assist Era

Ambiguity = Fatality. Run every step, every job.

1. SETUP

Confirm the traffic control plan and closure details with your supervisor before setting out any devices.

2. HAZARDS

Review job-specific hazards with the full crew.

3. PROTECTIVE MEASURES

Confirm high-visibility apparel, cone and sign placement per Ontario Traffic Manual Book 7, and any additional protective equipment required for this job.

4. ROLES

Confirm each person's role and responsibility for the job, including who is Traffic Control Person (TCP).

5. NEW: DRIVER-ASSIST CHECK

- ☐ Has this closure been reported so it shows up in real time for GPS and navigation apps? If Yes, note the reference number; if No, treat early approaching traffic as unaware of the closure.
- ☐ Is this a corridor or time of day where a lot of vehicles are likely running adaptive cruise control or lane-keep assist (e.g., a higher-speed arterial or highway ramp)? If Yes, confirm advance warning signage and a second Traffic Control Person are in place, not just the standard buffer distance.

If either answer is uncertain, treat approaching traffic as unpredictable until additional warning measures are in place.

General reference: Occupational Health and Safety Act (Ontario); Ontario Traffic Manual Book 7 (Temporary Conditions). Illustrative job aid designed by Jordan Smith as an instructional design portfolio piece.
